GAS GENERATORS AND PURIFIERS

## WIDE RANGING ANALYTICAL APPLICATIONS

Our Analytical line is the result of 40 years of gas generator production experience; it consists of **hydrogen, air and gas purifier generators, accompanied by a complete series of accessories and add-on components.**

The acquired know-how over the years means we can respond with **specific solutions to every analytical application:** gas chromatography, LC-MS, TOC, ICP, Sample Preparation, ELSD, Thermo Analysis and more.

Analytical line's strong point is in the **modular structure, made up of independent modules,** that have the same features:

- FREELY MODULAR WITH EACH OTHER,
- CAPABLE OF DISTRIBUTING DIFFERENT GASES,
- CAN BE ASSEMBLED VERTICALLY (FOR LESS DISPLACEMENT),
- CAN BE POSITIONED IN SEPARATE AREAS, WITH AN AIR COMPRESSOR THAT CAN BE PLACED IN A TECHNICAL AREA (NOISE REDUCTION INSIDE THE LAB),
- CAN BE ADAPTED TO USE AS A SOURCE OF COMPRESSED AIR ALREADY IN THE LAB,
- EQUIPPED WITH A **CPU (CENTRAL PROCESSING UNIT)** THAT ALLOWS:
  - ✓ INTEGRATING UP TO 32 MODULES, EVEN LOCATED IN DIFFERENT PRODUCTION AREAS, INTO A SINGLE ELECTRONIC CONTROL SYSTEM,
  - ✓ MONITORING EACH MODULE'S OPERABILITY,
  - ✓ READING THE MAINTENANCE TIMETABLES AND OPERATING HISTORY,
  - ✓ HAVING A SIMPLE, IMMEDIATE INTERACTIVITY THANKS TO THE 4" TOUCH SCREEN.

## WHY CHOOSE A CLAIND GAS GENERATOR

Whether talking about nitrogen, hydrogen or pure air, Claind offers a practical, economical alternative to pressurized gas cylinders and creating distribution lines.

ELIMINATE YOUR PRESENT DELIVERY, MANAGEMENT AND RENTAL COSTS, WITH AN EFFICIENT BUDGETARY MANAGEMENT THAT LETS YOU SEE PAYBACK FAST, AS WELL AS KEEPING OPERATING COSTS LOW.

THE WIDE RANGE CONSISTS OF RELIABLE, EASY-TO-USE GENERATORS, GUARANTEED LONG LIFE SPAN AND LOW MAINTENANCE COSTS.

CLAIND GENERATORS INCREASE YOUR COMPANY'S SAFETY, PRODUCING ALL THE GAS YOU NEED ONLY WHEN YOU NEED IT, ENSURING AUTONOMY AND PRODUCTIVE CONTINUITY.

While gas prices are going up, dispersion and volatility are a constant cost and delivery delays can stop your work, a Claind generator will be a trustworthy ally and a long term investment.

# SPECIFIC TECHNOLOGY FOR NITROGEN, ZERO AIR AND HYDROGEN PRODUCTION

## NITROGEN

Claind solutions for producing nitrogen self-production use **PSA (Pressure Swing Adsorption) technology.**

The PSA system consists of two beds of CMS (Carbon Molecular Sieve), alternatively pressurized and depressurized. Each bed can consist of one or more columns.

Compressed air, which has been pre-treated to eliminate dust and humidity, enters the base of the first active bed and flows through the CMS. Oxygen, carbon dioxide and other polluting substances in the air are trapped, but the nitrogen moves through the bed and exits at the top of the column towards a storage tank. After a certain time has elapsed, the by-now-saturated active bed is depressurized to be regenerated, while the cycle resumes symmetrically on the second bed.

In order to provide our customers with top of the line solutions and innovation, we have further improved the PSA technology, designing and registering the exclusive **FAST PURITY®** international patent that guarantees:

-  MAXIMUM NITROGEN PURITY WITHIN A FEW MINUTES AFTER TURNING ON,
-  INCREASE IN THE GENERATOR'S LIFE SPAN,
-  LESS MECHANICAL STRESS,
-  GREATER OUTPUT,
-  LESS AIR AND ELECTRICAL ENERGY CONSUMPTION.

ZERO AIR

**Claind has developed a catalytic reactor specifically for air filtration that is ideal for eliminating impurities.**

As a matter of fact, the Platinum Palladium HC system, found in most purifiers, allows the hydrocarbons (HCT < 0.1 ppm) to be completely removed at low catalysis temperatures for a stable, noise-free base line.

HYDROGEN

The technology Claind uses for electrolysis is:

- **PEM WITH SOLID ELECTROLYTE:**  
 THE MOST RECENT TECHNOLOGY WHICH IS NORMALLY USED IN GENERATORS FOR LAB APPLICATIONS THAT REQUIRE THE PUREST HYDROGEN;
- **MULTI-LAYER ELECTRODES:**  
 PRIOR TO PEM BUT VERY STABLE AND LESS DEMANDING IN TERMS OF WATER SUPPLY PURITY; IT IS USUALLY USED TO PRODUCE HYDROGEN FOR APPLICATIONS ON GC FID IN ENVIRONMENTAL OR PROCESS ANALYSES.

## HYDROGEN AS OPPOSED TO HELIUM

Helium has always been used and considered as the main choice for an analytical carrier gas.

However, helium's current natural resources are running out and such large demand is no longer possible.

As a matter of fact, many labs have been having more frequent problems finding it. Suppliers can no longer provide helium in sufficient time and for reasonable costs.

Using hydrogen instead of helium is less well-known but **its advantages are consistent:**

-  MORE ECONOMICAL,
-  EASY TO FIND,
-  CAN BE USED AT LOWER TEMPERATURES,
-  GREATER COLUMN DURATION,
-  FASTER SEPARATION,
-  LESS ANALYSIS TIMES.

## CHOOSE THE RIGHT PRODUCT FOR YOUR APPLICATIONS

### GAS CHROMATOGRAPHY

**The natural configuration for gas chromatography is the “tower”:** four generators (hydrogen, nitrogen, zero air and compressor) are stacked one on top of the other, allowing a reduction in displacement.

The generators can also be used individually as independent modules or combined in 2 or 3 module versions.
